Summary

Final-year BITS Pilani student with proficiency in C++, Python, JavaScript, SQL, and full-stack development. Experienced in building scalable applications and highly interested in AI/ML with a focus on Deep Learning.

Education

Birla Institute of Technology & Science, Pilani

Expected 2026

B.E. Electronics and Instrumentation, Minor in Computational Intelligence

CGPA: 7.68

Relevant Coursework

- Data Structures and Algorithms
- Object Oriented Programming
- Operating Systems
- Database Management Systems
- Deep Learning
- Artificial Intelligence

Experience

Machine Learning Intern – Finlatics (FincruX Technologies LLP)

June 2024 – July 2024

Internship

- Analyzed 7050+ Facebook Marketplace posts using K-means clustering (silhouette score: 0.816) to optimize posting strategy, identifying 7-8 PM as optimal window and achieving 2.7 times higher engagement.
- Built multiple linear regression model on 200+ advertising campaigns ($R^2=0.875$) proving TV advertisement as the most impactful, quantifying an 87% accuracy drop when excluded.

Projects

AI-Powered Study Companion

May 2025 – Aug 2025

<https://github.com/Git4Lokesh/AI-Powered-Study-Guide>

- Developed a full-stack platform that generates personalized study notes, flashcards, and quizzes from topics or PDFs. Containerized back-end using Docker and deployed on Render for scalable, cloud based hosting.
- Developed secure RESTful APIs using Node.js/Express and PostgreSQL, integrated Perplexity AI via Axios, implemented authentication with Passport.js and bcrypt, and optimized session management with Redis.

Joint Intent Detection and Slot Filling with Peephole LSTM Networks

Oct 2025

<https://github.com/Git4Lokesh/NLP-Assignment-2>

- Implemented and benchmarked four neural architecture variants (Independent, Slot-to-Intent, Intent-to-Slot, and Joint models) using custom Peephole LSTM cells on the ATIS dataset, achieving 95-96% accuracy.
- Designed a complete NLU pipeline with PyTorch including custom LSTM cell implementation and comprehensive evaluation revealing that Slot-to-Intent architecture achieved 95.5% F1 through strategic feature sharing.

Scalable Real-Time Chat Moderation System

Feb 2025 – Apr 2025

<https://github.com/Git4Lokesh/OS-Project---Chat-Moderation>

- Built a distributed moderation system in C using Linux IPC such as POSIX message queues for 1,500+ users.
- Optimized multi-process concurrency across 3 modules (App.c, Group.c, Moderator.c) to ensure low latency.

NLP Classification Pipeline with Custom GloVe Implementation

Aug 2025 - Sept 2025

<https://github.com/Git4Lokesh/NLP-Assignment-1>

- Implemented GloVe word embedding algorithm from scratch with mathematical derivation of co-occurrence weighting, AdaGrad optimization and gradient computation on a 30,000 document corpus.
- Built multi-feature classification pipeline combining custom embeddings with FastText and N-gram features, applying models such as SVM, MLP, Naive Bayes for movie genre prediction.

Technical Skills

Languages: C++, Java, Python, JavaScript, C, SQL

Frameworks & Tools: Backend (Node.js, Express, Motoko), Frontend (React, EJS, Bootstrap), Docker, Git

Databases & Cloud: PostgreSQL, MySQL, AWS

Certifications

AWS Cloud Practitioner (Coursera via AWS, 2025); Full Stack Web Development (Udemy, 2025)

Extra-curricular Achievements

Leetcode: 1653 contest rating, top 16% worldwide. 300+ problems solved in C++, top 3% worldwide.
